In 1938, Roy Roberts came up with an idea of how to install wall-to-wall carpet without using the traditional method of using tacks around the edges of the room. Roy Roberts, Hugh Livie and Ken Bishop each put up $1,000 and invested in some plywood, a Sears-Roebuck table saw, a keg of shingle nails, pliers, hammers and similar essentials. And so, the story of ROBERTS and the ROBERTS carpet gripper was born.

While traveling around the country selling and training installers on how to use ‘tackless carpet strip’, the three partners gained tremendous knowledge about carpet installation. It gave them an opportunity to see firsthand what other materials and products might be necessary to help modernize carpet installation techniques for the whole industry. There was an obvious need for modern tools and techniques. The partners obtained national sales rights for the most modern knee-kickers and extension stretchers they could find. They then acquired manufacturing rights and made improvements under the ROBERTS label. The company held early patents on knee kickers, carpet seaming irons, loop pile carpet cutters, carpet knives, a carpet binding machine and tack strip. As they developed new tools and new ways to install flooring, they continued to educate carpet installers on newer methods of installations.

The carpet industry had also just begun to use liquid latex for carpet seaming and repair, so the newly formed company developed a new latex formula of its own and labeled it Rubber-edge, laying the groundwork for today’s thriving adhesives division of Roberts Consolidated Industries, Inc.

Now, over 80 years later and with locations and product lines known throughout the world, generations of installers have grown up using ROBERTS adhesives, carpet installation tools and accessories. Worldwide, the ROBERTS name continues to be the manufacturer of choice for installation professionals who demand quality and reliability.

NWFA recommends that you follow the flooring manufacturers’ installation guidelines regarding the tool and fastener to be used on your floors. The recommendations in this catalog are intended to be a guide to assist the user in placing the flooring fastener in the correct position, protect the pre finished surface and to obtain optimum installation results using industry standard guidelines. Always test the flooring for nail placement before full installation.

Natural Cork

- Reduces sound transmission from both the surface of a floor as well as through the floor to living spaces below
- Use under ceramic tile, stone, marble, engineered hardwood and laminate floors
- Acts as a crack isolation membrane that resists transfer of stress cracks from subfloor through to flooring surfaces
- Reduces thermal transmission, increasing the effectiveness of floor heating systems

* IIC measures sound such as moving furniture and walking, STC measures sound such as voices and television. Minimum sound rating required by most building codes and architects is 50. R-Value is the rating used to measure resistance to heat flow. Δ Delta Rating is the only true measurement of sound reduction from a product (not a floor assembly) in the industry.

About California Proposition 65

Proposition 65 is a California regulatory law that requires businesses to notify California consumers about specific chemicals in the products they purchase so they can make informed decisions about protecting themselves from exposure to these chemicals. This law requires companies to properly label products that contain chemical(s) above certain threshold levels.

As part of Q.E.P. Co. Inc.’s continued best business practice and compliance program, we comply with Proposition 65 warning requirements and provide product-associated warnings. We are dedicated to meeting consumer product safety requirements applicable to our products and strive to provide high quality and safe products.

For more information on California Proposition 65, go to www.P65Warnings.ca.gov.
