Do not use with metal hammers

For resilient vinyl tile and plank

For tongue and groove

For click-lock floors

Scan here for PRODUCT INFORMATION

The ROBERTS® Universal Tapping Block is designed to push planks together without damaging the flooring. Two sided, and with edges designed for tongue and groove and click-lock floors, the unique design of this tapping block works with most types of flooring including resilient vinyl tile, laminate and hardwood planks. It is easy to use by lightly tapping the boards together to create a tight seam. The 9.25" width provides plenty of space to tap with a soft-head mallet only, not with a metal hammer, to protect your flooring tongue or edge from damage during installation, contributing to professional results.
